### Brief Details.

Accident along Yio Chu Kang road about 8.35 am.

I was on my way to work and riding along Yio Chu Kang road on the 26 Feb. I was on the centre lane and there was a vehicle on my right. The traffic light was showing as green light. As I was crossing the junction, a taxi hit my motorbike and the next minute I was lying on the floor. I remember being assisted by a young couple however unsure of how Long I was lying in the road. Suddenly I felt a sharp pain on my hip and only than realised me being transferred to an ambulance. Sandy (contact details available) who has witnessed the accident has provided her contact details to one of the helpers who was assisting me into the ambulance.

### **Brief Details.**

On 26/02/2020 at about 0835hrs, I was driving my taxi (A Blue Hundai Ioniq, SHA7114J) along Yio Chu Kang. I was from Serangoon Area and heading towards Ang Mo Kio. I came across the junction of Yio Chu Kang Road and Ang Mo Kio Avenue 5. I intended to make a right turn into Buangkok Green. I was at the right-most lane that could make a right-turn. I made a check and the light was green in my favour, hence I inch out into the right turn area. I checked for oncoming traffic and see none, hence I moved my vehicle. Suddenly, there was a motorcycle (A Red honda, FBL5407R) rode into my direction, I could not react in time and we collided.

The point of impact was on the back passenger side door of my vehicle. The rider fell onto the road. He had no pillion and I had no passenger. I wish to state that the police and ambulance visited the scene. I did not manage to get the guy's details as he was conveyed to Hospital. I was issued a police case card and my Taxi's CCTV memory card was handed over to the police. I was advised to make a traffic accident report with the police.

I was not injured.

**Emergency Department** 

Dear Sir/Mdm,

MEDICAL REPORT ON: SURIYANDRA S/O TANAGOBAL

NRIC NO: S8100763B

DATE/TIME SEEN: 26/02/2020 AT 09:56 HRS BY PRASEETHA NAIR (DR)

DIAGNOSIS: CLOSED INTERTROCHANTERIC FRACTURE

The above mentioned patient was seen at the Emergency Department of Tan Tock Seng Hospital on 26/02/2020 at 09:56 hours by myself after being involved in a road traffic accident. He was riding his motorcycle straight through a junction, when he was hit by a vehicle making a right turn from the opposite direction. As a result of the impact, he fell onto his right side. He was not flung, he did not sustain a head injury nor did he lose consciousness, and his helmet remained on and intact. However, he was not able to get up due to the pain in his right hip and lower limb.

During the initial assessment, his vitals were noted to be stable. His main injuries noted were:

- 1. Right thumb abrasion, with full range of movements of joints of the finger.
- 2. Left wrist diffuse tenderness.
- 3. Right hip limited range of movement due to pain, with tenderness extending down length of femur.

Bedside ultrasound investigation was also unremarkable.

X-ray of his right femur revealed a fracture of the proximal most portion of the bone.

As such, the patient was admitted under the care of the Orthopedic surgical team for further management.

5TH November 2020

HOH LAW CORPORATION (REDHILL) BLOCK 78 #01-07 REDHILL LANE SINGAPORE 150078

Dear Sir/Mdm.

# SPECIALIST MEDICAL REPORT ON SURIYANDRA S/O TANAGOBAL NRIC NO.: \$8100763B

The above mentioned patient was admitted under my care through the emergency department on 26th Feb 2020. He was involved in a road traffic accident for which he was a motorcyclist hit by a taxi.

He suffered a right intertrochanteric fracture for which he underwent surgical fixation on 26th Feb 2020. He was commenced on partial weight bearing and progressed to full weight bear as tolerated. His postoperative period was complicated by fever secondary to a chest infection for which it has since resolved.

His fracture has since healed.

A Recent CT Scan done on the 23rd Oct 2020 showed complete healing of the fracture with no sequelae of avascular necrosis or osteoarthritis.

At the last visit on 5th November 2020, he has no pain or discomfort. But he had a mild limp noted in clinic which is attributed to abductor muscle weakness. This has since improved significantly with physiotherapy. This might affect his combat fitness until this muscle weakness recover completely. The duration may take up to 2 years.

The recent CT Scan did not show any signs of osteoarthritis or avascular necrosis yet but it does not preclude future earlier onset of hip osteoarthritis or avascular necrosis given the history of his injury.

Medical-in-Confidence

As for his implants and possible future surgeries, there are 3 possible scenarios:

1. Early avascular Necrosis without osteoarthritis.

The cost of removal of implant with table code of 2B and core decompression for avascular necrosis at table code 5C under a day surgery stay of 1 day at B1 class rates is estimated at \$15000 to \$18000.

- 2. If end stage osteoarthritis or severe avascular necrosis then the cost of a total hip replacement at a table code of 6B with a length of stay of about 3 to 5 days at B1 class is estimated to cost about \$23600 to \$25000.
- 3. No complications and just for removal of implants for A class with 1-day stay in day surgery ward with a table code of 2B is estimated about \$3000 to \$5000.

Yours faithfully,

Dr Kelvin Tan Guoping
