Shimano XT M8000 Disc Brakes

Made in Japan

Comes complete whole Brake set

(Front and Rear) - plug and play. Ready to race. Without disk brake Rotors, bolts and adapters (Sold separately)

Shimano's XT M8000 Disc Brake is powerful and fully-bleed to deliver superb stopping prowess in all conditions. The fully-bleed lever and caliper comes without adapters or rotors, which gives you the freedom to customise your bike for the ideal riding experience.

Ride Aggressively with XT M8000 Disc Brake

Featuring a short stroke Servo-Wave mechanism for quick pad engagement, this setup allow you to ride as aggressively and powerfully as the trail demands. A shim-less mounting system means the installation and setup process is quick and easy. Complete with oversized 22mm twin phenolic pistons that have been optimised to save weight, insulate from heat, and deliver a stiff performance

Dcbikes Product Features :

Brake Lever: 2 Finger, Forged Alloy

Brake Pads : Aftermarket Metal compound for ultimate performance

Reach Adjuster: Yes

Servo Wave Action Power Adjuster: Yes

Brake Hose Type: SM-BH90-SBM

Calliper Mount Type: Hydraulic Disc Brake

Piston Type: 2

Mount: Hinged clamp for quick installation, I-spec-II compatible

Recommendation: Use with Ice Tech rotors for optimum braking performance (not supplied)

Shimano XT M8100 2x12-speed Group Clamp 10-45

Made in Japan

The Deore XT M8100 is Shimano's newest weapon in search of mountain bike fun and adventure. As the first group of components designed specifically for mountain bikes ever, the Deore XT M8100 continues its success story based on high durability and reliable performance.

Technologies

DYNAMIC CHAIN ENGAGEMENT+

SPECIAL GEAR TEETH FUNCTION SHIMANO'S DYNAMIC CHAIN ENGAGEMENT+ is a special gear teeth profile designed for use in single-chainring configurations for XC, enduro, and trail riding. It gives more chain retention and smoother pedaling - even over bumpy terrain. Chain retention of any gear will reduce abrasion and worn out.

HOLLOWTECH II

Providing the best balance of stiffness, strength, weight and rotating performance The concept of HOLLOWTECH II technology is focused on producing a superior crankset which will maximize a rider's power transfer. The rigidity of the crankset ensures pedaling efficiency while its weight, a key element of the crankset, you want light, aids in cycling longer distances over which the rider needs to pedal more. Naturally, SHIMANO strove for the optimum balance between the conflicting needs of stiffness while producing a lightweight crank. HOLLOWTECH technology is an ultra-lightweight hollow crankarm created by SHIMANO with the company's own proprietary forging technology that also maintains rigidity. The addition of HOLLOWTECH II technology integrates the bottom bracket axle with the right crankarm for more stiffness and a weight savings to achieve a high-dimensional balance. Its outboard bottom bracket bearing system provides better weight distribution and more pedaling stability, allowing for more efficient power transfer. The HOLLOWTECH II crankset has been developed by pursuing the optimum balance of stiffness & rotating performance in a lightweight and beautiful crankset design. High Precision Sealing Moreover, HOLLOWTECH II crankset has a high-precision sealing in the bearing area to increase durability maintaining the excellent rotating performance for long periods.

Instant Release

INSTANT RELEASE shifting replaces the two-stage click and release shifting you are familiar with. INSTANT RELEASE shifting releases cable as soon the lever is activated, resulting in the quickest possible gear changes. Whether it is an upshift with a Top Normal rear derailleur or a downshift with low normal rear derailleur a quicker shift is always a better shift.

2-Way Release

The RAPIDFIRE Plus shifter release lever is commonly called a trigger because it is operated like a pistol, by pulling toward the grip. The release lever of RAPIDFIRE Plus shifters from ALIVIO to XTR can be operated in this same manner but adds the ability to activate a release shift by pushing with the thumb.

Rapidfire Plus

Mountain bikers have used RAPIDFIRE Plus since 1985. RAPIDFIRE Plus is still a winning choice from a wide range of riders from XC racers to freeriders. RAPIDFIRE Plus is suited to quick shifting, giving riders the ability to downshift three gears in one stroke. RAPIDFIRE Plus shifters from DEORE to XTR all feature 2-WAY RELEASE, which means release shifts by pull of the index finger or push of the thumb.
