CIRCUMSTANCES OF ACCIDENT

On 13/12/2021, at about 09:25 hrs, my vehicle was along the traffic junction of Woodlands Ave 2 in lane 5. The weather was clear with dry road surfaces. As I was stationary while waiting for traffic light to turn green, a vehicle, XB8546U, suddenly collided into the rear of my bus and caused my bus to move forward and hit the motorcycle in front of me. Subsequently, I alighted from my bus to exchange particulars with the driver of XB8546U. However, the motorcyclist drove off before I got hold of the particulars. As a result, my bus sustained damages on the rear while XB8546U sustained no damages.

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the relationships between these factors. Once the causes of the problem have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Once a plan of action has been developed, the final step is to implement the plan. This involves carrying out the steps that have been identified in the plan and monitoring the progress of the implementation.

2. The second step in the process of identifying a problem is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the relationships between these factors. Once the causes of the problem have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Once a plan of action has been developed, the final step is to implement the plan. This involves carrying out the steps that have been identified in the plan and monitoring the progress of the implementation.

3. The third step in the process of identifying a problem is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Once a plan of action has been developed, the final step is to implement the plan. This involves carrying out the steps that have been identified in the plan and monitoring the progress of the implementation.

4. The fourth step in the process of identifying a problem is to implement the plan. This involves carrying out the steps that have been identified in the plan and monitoring the progress of the implementation. Once the plan has been implemented, the final step is to evaluate the results of the implementation. This involves determining whether the problem has been solved and whether the resources have been used effectively.

5. The fifth step in the process of identifying a problem is to evaluate the results of the implementation. This involves determining whether the problem has been solved and whether the resources have been used effectively. Once the results of the implementation have been evaluated, the final step is to document the results of the implementation. This involves recording the steps that were taken to solve the problem and the resources that were used to implement the plan.

I/We declare the foregoing particulars are true in every respect.
