Dear Sir/Madam,

RE: Medical Report of MUHAMMAD REDZUAN AMIR BIN (S9710024A)

The above named patient was seen at Mount Alvernia Emergency Department on 14-Feb-2022 following a Road Traffic Accident on 12-Feb-2022. The patient was riding his motorbike and hit into the left side of a taxi. He was wearing a helmet and there was no head injury reported, no loss of consciousness or vomiting after.

He reported having superficial abrasions to both shoulders, his left forearm and left thigh. He also had left ankle and left thigh swelling. He had been seen by a doctor in the polyclinici and an xray of his left ankle was performed which he was told was normal. Today he re-presented due to upper back, left lower back and groin pain.

Examination revealed tender bilateral para-cervical and trapezius muscle tenderness, along with superficial abrasions but was otherwise normal. No further imaging was deemed necessary.

He was diagnosed with neck, lower back and groin strain. He was discharged the same day with analgesia and return advice should his symptoms not improve.

He was also issued a medical certificate for 3 day(s) from 15-Feb-2022 to 17-Feb-2022 inclusive.

For your information,

With best regards,
Yours sincerely

Dheeraj Prem Khatani

28 February 2022

MEDICAL REPORT ON MUHAMMAD REDZUAN AMIR BIN MOSTAPAR
NRIC NO: S9710024A, male, 2/4/1997

Mr Muhammad Redzuan Amir Bin Mostapar visited Yishun Polyclinic on 12 February 2022. The consultation details are as follows:

He presented after an alleged road traffic accident and complained of injuries on 4 limbs and his back with pain over his left ankle.

On examination, the following were found:

- Right upper shin laterally: 4 cm linear abrasion
- Right mid shin: 1 cm linear abrasion
- Left medial malleolus: swelling and mild tenderness
- Left upper shin medially: 3 cm linear abrasion
- Left mid-thigh: two linear abrasions, each measuring 6 cm and 3 cm
- Left popliteal fossa: 2 cm x 2 cm superficial abrasion
- Right upper limb: 2 cm x 2 cm superficial abrasion
- Left proximal forearm: two superficial abrasions measuring 5 cm x 1 cm and 5 cm x 1 cm
- Left elbow: 1 cm abrasion
- Left shoulder: 2 cm x 3 cm superficial abrasion
- Left lumbar area: 2 cm x 2 cm bruise
- His gait was normal
- Pelvic compression was negative
- No bruising was noted over his genitalia

An X-ray of the left ankle was performed which found soft tissue swelling around the ankle joint, but no fracture or dislocation. Please see attach X-ray report.

His diagnosis is that of superficial abrasions on his 4 limbs, soft tissue injury of his left ankle, and bruise on his back.

He was treated with Etoricoxib 90mg OM PRN for 5 days and given medical leave from 12 February 2022 to 14 February 2022.

If you have any further enquiries kindly contact us.

Yours sincerely,

XR Ankle Joint AP and Lateral Left (Order 1205682044)
